

Practical no. 5: Design a webpage using html, css and js to perform following operations:

- a. Read a string from textbox and calculate the length.
- b. Read a number from textbox and display digits in reverse order.

Code :

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>String and Number Operations</title>
  <style>
    body {
      font-family: Arial, sans-serif;
      max-width: 600px;
      margin: 20px auto;
      padding: 20px;
      background-color: #f0f0f0;
    }
    .container {
      background-color: white;
      padding: 20px;
      border-radius: 8px;
      box-shadow: 0 0 10px rgba(0, 0, 0, 0.1);
    }
    .form-group {
      margin-bottom: 15px;
    }
    label {
      display: block;
```

```
    margin-bottom: 5px;
    font-weight: bold;
}
input {
    width: 100%;
    padding: 8px;
    border: 1px solid #ccc;
    border-radius: 4px;
    box-sizing: border-box;
}
button {
    background-color: #4CAF50;
    color: white;
    padding: 10px 20px;
    border: none;
    border-radius: 4px;
    cursor: pointer;
    margin-right: 10px;
}
button:hover {
    background-color: #45a049;
}
.result {
    margin-top: 10px;
    font-size: 16px;
    color: #333;
}
.error {
    color: red;
    font-size: 14px;
    margin-top: 5px;
}
```

```
</style>

</head>

<body>

  <div class="container">

    <h2>String and Number Operations</h2>

    <div class="form-group">

      <label for="stringInput">Enter a String</label>

      <input type="text" id="stringInput" placeholder="Type your string here">

      <button onclick="calculateStringLength()">Calculate Length</button>

      <div id="stringResult" class="result"></div>

      <div id="stringError" class="error"></div>

    </div>

    <div class="form-group">

      <label for="numberInput">Enter a Number</label>

      <input type="text" id="numberInput" placeholder="Type your number here">

      <button onclick="reverseDigits()">Reverse Digits</button>

      <div id="numberResult" class="result"></div>

      <div id="numberError" class="error"></div>

    </div>

  </div>

  <script>

    function calculateStringLength() {

      const stringInput = document.getElementById('stringInput').value;

      const stringResult = document.getElementById('stringResult');

      const stringError = document.getElementById('stringError');

      stringResult.textContent = "";

      stringError.textContent = "";

    }

  </script>

</body>

</html>
```

```

    if (!stringInput.trim()) {
